Centrack™

EFFECTIVE CONTROLLED SUBSTANCE MANAGEMENT

Every year, health care facilities incur high costs associated with managing controlled substances or narcotics. For these medications, prices are higher, regulatory mandates are more stringent and diversion is all too frequent.

With federal and state regulatory authorities, as well as patient safety advocate organizations, issuing specific guidelines for managing these high profile medications, more and more health care facilities are turning to technology. The result is an increasing demand for controlled substance management software solutions.

At ARxIUM, that solution is Centrack. Centrack is fully integrated into the MedSelect system and is designed to close the loop on monitoring the complete life cycle of controlled substances in a facility. Centrack provides value in three key areas: increased inventory management, cost control and regulatory compliance.

Inventory Management
Data is fully integrated with the MedSelect database to provide real-time inventory of the MedSelect stations for reconciliation, replenishment and reporting functions, along with tracking controlled substances in the pharmacy and other areas of the hospital.

Cost Control
Centrack helps reduce the costs associated with diversion by providing real-time usage and activity data so facilities can see who dispensed a medication and when. This visibility can help identify potential areas of diversion and report on that activity if necessary.

Regulatory Compliance
With its robust reporting capabilities, Centrack enables users to easily produce the data necessary to satisfy audit requirements and maintain the integrity of the controlled substance management process.

Leveraging the same cabinet hardware, Centrack is typically sold in conjunction with MedSelect Flex cabinets, ARxIUM's premier automated dispensing cabinet solution, but it can also be utilized as a software only solution. The combination of Centrack software and MedSelect Flex cabinets provides our safest and most reliable solution for managing your controlled substances.

Centrack can be sold with any of the following:

MedSelect Flex Cabinet Modules:
*   Main Drawer Module
*   Compact Drawer Module
*   Standard Cabinet Module
*   Tower Module
*   External Lock Module

Centrack Components:
*   Client Computer
*   19" Touch Screen Monitor
*   Keyboard, Mouse, UPS
*   IB Communication Module (with cabinets)
*   Barcode Scanner
